PROFESSIONAL SUMMARY

Engineering leader with 12+ years of UAE experience delivering enterprise-scale software, AI-enabled platforms, and cloud-based systems across industrial automation and internal product teams. Proven record of leading engineering teams, modernizing legacy systems, and driving productivity through AI-assisted development, cloud architecture, and Agile delivery. Strong in stakeholder management, system design, risk reduction, and long-term platform ownership. Hands-on with modern DevOps toolchains (Harness, GitHub Actions, Docker, Kubernetes) and agentic AI platforms (MCP, Claude Agent SDK, RAG).

KEY ACHIEVEMENTS

- Improved engineering delivery speed by ~40% through structured adoption of AI-assisted development tools (GitHub Copilot, Cursor.ai).
- Led modernization of legacy enterprise systems, reducing deployment downtime and improving release stability across business-critical applications.
- Designed and deployed AI-powered internal platforms (RAG-based chatbots) enabling faster access to technical documentation and reducing dependency on senior engineers.
- Built and scaled backend systems on Azure and AWS with Harness-managed CI/CD pipelines, containerised deployments (Docker/Kubernetes), ensuring reliability, security, and cost-aware architecture.

CORE SKILLS & EXPERTISE

Leadership & Management:

Engineering Management • Team Leadership • Hiring & Mentoring • Performance Reviews • Stakeholder Communication • Agile Delivery • Technical Decision-Making

Architecture & Engineering:

System Design • Microservices • API Design • Distributed Systems • Cloud Architecture (Azure, AWS) • CI/CD (Harness, GitHub Actions) • Legacy Modernization

AI & Platform Engineering:

AI-Assisted Development • RAG Pipelines • MCP Servers • Agentic AI Orchestration • Internal AI Platforms • Chatbots • Developer Productivity Tooling

PROFESSIONAL EXPERIENCE

Team Leader – Software Development & AI Initiatives

LiSEC Automation Middle East FZ-LLC | Dubai, UAE | October 2021 – Present

- Lead and mentor a cross-functional engineering team delivering enterprise applications used across industrial automation and internal platforms.
- Own technical planning, architecture decisions, and delivery execution in collaboration with product owners and senior stakeholders.

- Introduced and governed AI-assisted development practices (GitHub Copilot, Cursor.ai, Claude Agent SDK), resulting in measurable productivity gains, reduced rework, and accelerated prototyping cycles.
- Designed scalable backend systems using .NET Core, Python, and NestJS, integrated with React and Next.js frontends, deployed on Microsoft Azure and AWS with infrastructure-as-code practices.
- Implemented CI/CD pipelines using GitHub Actions and Harness, with Docker and Kubernetes-based deployments, improving release predictability, reliability, and operational stability.
- Actively participate in hiring, onboarding, technical reviews, and mentoring of engineers.
- Led and mentored a distributed team of 20 engineers across backend, frontend, and platform initiatives spanning Dubai and Austria.

Senior Software Developer – Full-Stack (.NET & Cloud)

LiSEC Automation Middle East FZ-LLC | Dubai, UAE | October 2020 – October 2021

- Built and deployed full-stack web applications using .NET Core and React, with emphasis on code readability, API performance, and scalability within the Azure cloud environment.
- Converted legacy monolithic applications into modular, service-oriented components, which led to a measurable reduction in deployment downtime and simplified ongoing maintenance.
- Established Agile delivery routines including sprint planning, retrospectives, and backlog refinement with the product owner, resulting in a 30% improvement in sprint goal completion.
- Integrated SQL Server data models and Azure-based storage solutions to support high-availability application architecture and ensure consistent data integrity across environments.

Computer Programmer – Full-Stack Software Developer

LiSEC Automation Middle East FZ-LLC | Dubai, UAE | September 2013 – October 2020

- Developed and maintained software for industrial automation systems using C# and .NET Framework, ensuring integration with machine-level hardware and real-time data processing requirements.
- Built internal development tools and reusable code libraries to reduce repetitive coding tasks, increase developer efficiency, and standardize implementations across projects.
- Reviewed peer code for adherence to best practices, contributed to technical documentation libraries, and supported onboarding and upskilling of junior developers through structured mentoring sessions.

AI, COPILOT & PERSONAL PROJECTS

- **Enterprise RAG Chatbot:** Built an AI-powered chatbot using LangChain and OpenAI for internal documentation queries — 800+ documents indexed, 2 languages supported, 98% query accuracy. Reduced dependency on senior engineers for knowledge access.
- **AI Code Orchestration Agent:** Built an agentic platform using Claude Agent SDK and MCP that reads Jira requirements, plans full-stack implementation, and executes parallel sub-agents for code generation, testing, and code review — 90% reduction in code review comments, 4 parallel agent sub-tasks.
- **Enterprise MCP Server (On-Prem Jira & Confluence):** Built a production Model Context Protocol server connecting on-prem Jira and Confluence to Copilot Studio — 60% L1 ticket deflection rate, 100% on-prem data compliance, zero cloud data exposure.

Dubai Spotter V2 — AI Real Estate CRM: Production-grade property intelligence platform — monorepo with NestJS API, Next.js web, and 2 Expo mobile apps. AI calling via Retell AI, PostGIS property search, Stripe multi-tenant billing, 49+ backend modules, 37+ frontend features.

Vantastix — GenZ Print E-Commerce: Full-stack print-on-demand platform (Next.js 15, TypeScript, MongoDB) for Indian GenZ market 2-hour Pune delivery, live custom design editor, Razorpay payments, 137+ unit tests across 24 test suites.

VelocityVote — Planning Poker App: Open-source (Apache 2.0) real-time planning poker for distributed agile teams. React, TypeScript, Pusher Channels. Anonymous reveal to eliminate anchor bias, multiple card decks, free forever.

CERTIFICATIONS & LEADERSHIP TRAINING

- GitHub Copilot (GH-300) – GitHub | Issued Apr 2026 · Expires Apr 2028
 - Microsoft Certified: AI Transformation Leader | Issued Apr 2026
 - Google – Engineering Manager Foundations
 - Professional Scrum Master™ I
 - Professional Scrum Developer™ I
 - PCEP – Python Certified Entry-Level Programmer
-

TECHNICAL SKILLS

- **Frontend:** React, Next.js, TypeScript, JavaScript (ES6+), React Native, Expo, HTML5, TailwindCSS, Flutter
 - **Backend:** C#, .NET Core, ASP.NET MVC, Python (FastAPI, LangChain), Node.js, NestJS, Prisma, BullMQ
 - **Databases:** PostgreSQL, PostGIS, SQL Server, MongoDB, Firebase, Redis
 - **AI/ML:** RAG Pipelines, LangChain, OpenAI API, Claude Agent SDK, MCP (Model Context Protocol), Hugging Face, Retell AI
 - **Cloud & DevOps:** Microsoft Azure, AWS, Docker, Kubernetes, GitHub Actions, Harness, CI/CD Pipelines
 - **Agile Methodologies:** Scrum, Kanban, Sprint Planning, Team Coaching
 - **Tools & Platforms:** GitHub Copilot, Cursor.ai, Copilot Studio, Visual Studio Code, Postman, Jira, Confluence, Git, Playwright
-

EDUCATION

Bachelor of Engineering in Computer Science

RGPV Technical University | Bhopal, India | 2004 – 2008
